OBJECTIVE

Passionate about Continuous Learning and Strong Problem-Solving Skills with a Focus on Developing Innovative Solutions to Technical Challenges.

SKILLS AND INTERESTS

Technical Skills	Introduction to C, Python, Java, MS office, MS PowerPoint, MS Excel
Soft Skills	Critical thinking, Decision making, Problem Solving, Team Player

EDUCATION

KLS Vishwanathrao Deshpande Institute of Technology, Haliyal	Dec 2021 - 2025
Bachelors of Engineering in Electrical and Electronics	CGPA: 7.43
PC Jabin PU College Of Science, Hubli	Jun 2019 – Jul 2021
PUC (Class XII)	Percentage: 71.16
Saint Andrew’s English Medium High School, Hubli	April 2019
SSLC (Class X)	Percentage: 72.32

INTERNSHIPS

Carriage Repair Workshop	Oct-Nov 2023
Under the South Western Railway Department	<i>Hubli</i>
• Completed a dynamic internship program at Railway Workshop focused on practical knowledge and industry exposure. • Practical Knowledge: We learnt how railway coaches are maintained and repaired, gaining hands-on experience with mechanical systems like brakes, bogies, and welding work. • Industry Exposure: We also understand how a large workshop functions, how different teams coordinate, and the importance of safety and discipline in a real industrial environment.	
Rooman Technologies	Oct-Nov 2024
VTU-National Skill Development Corporation (NSDC)	<i>Haliyal</i>
• Completed a dynamic internship at Rooman Technologies focusing on technical learning and industry exposure. • Technical Learning: We learned how to clean, validate, and manage data using tools like Python, SQL, and Excel to ensure high-quality input for AI models. • Industry Exposure: We gained practical experience through real-time projects and improved our communication, teamwork, and professional skills for the workplace.	

PROJECTS

- **Automatic Irrigation System Using Arduino:** We developed an automatic irrigation system using Arduino and a soil moisture sensor to activate a water pump only when needed, helping to conserve water efficiently.
- **Password Based Circuit Braker:** We developed a password-protected circuit breaker using Arduino and a keypad to allow only authorized users to control the power, enhancing electrical safety and security.
- **Automatic Load Sharing of Parallel Transformers Using Arduino:** We developed a prototype to automatically share load between two transformers using Arduino. The system monitors current and voltage, redistributing the load if one transformer exceeds limits. Through this, we gained knowledge of power systems, automation, and load management.

HOBBIES AND INTEREST

- Cycling
- Cooking
- Listening
