SUMMARY

A Computer Science and Engineering student with foundational knowledge in programming languages, data structures, operating systems. Committed to continuous learning and keeping up-to-date with emerging technologies and industry trends. Highly motivated to enhance technical skills and gain practical experience through internships, projects, and collaborative opportunities. Passionate about technology and continuously seek opportunities to learn and grow in the field.

EDUCATION

Mangalore Institute of Technology and Engineering

2022 – 2026

BE in Computer Science - CGPA - 9.2/10.0

Moodbidri, Karnataka

Sri Venkataramana Pre- University College

2020 – 2022

Karnataka Pre-University Board—P.C.M.B Percentage - 95.67%

Kundapur, Karnataka

Sri Venkataramana English Medium School

2019 – 2020

Karnataka State Board Percentage - 95.34%

Kundapur, Karnataka

TECHNICAL SKILLS

Languages: Java, C, SQL, HTML/CSS, MERN Stack, Python.

Developer Tools: MYSQL, Visual Studio, Pycharm, Code Blocks, Ubuntu, Aurdino IDE, Postman.

EXPERIENCE

Edunet Foundation

June 2024 – July 2024

Student Intern

- Completed a Certification in AI and Cloud conducted by Edunet Foundation in collaboration with AICTE. Gained hands-on experience in artificial intelligence and cloud computing through the development of the Language Switch System, an AI-powered multilingual application enabling text-to-speech, voice translation, and real-time language switching using Python and Flask. Also explored basic cloud deployment strategies for scalable AI applications.

Navodita Infotech

October 2025 – November 2025

Python Intern

- Completed a Python internship at Navodita Infotech, where I developed a Personal Finance Manager web application using Python and Flask. The application helps users track income, expenses, and budgets efficiently. Integrated SQLite for data storage and Matplotlib for visualizing financial trends through charts and graphs. The system also provides personalized financial recommendations to support better money management.

Infosys Technologies

October 2025 – December 2025

AI Intern

- Currently pursuing an internship focused on developing an AI-based music composition system that automatically generates melodies and harmonies using machine learning algorithms. The project involves backend development using Django, REST API integration, and testing with Postman to ensure smooth audio generation, playback, and system performance.

Udupi Web Solutions

January 2026 – May 2026

Software Development Intern

- Worked as a Software Development Intern at Udupi Web Solutions, contributing to the design and development of an Inventory Management System using Laravel, PHP, MySQL, and XAMPP. Implemented user authentication, dashboard analytics, product management (CRUD operations), category-based filtering, inventory tracking, low-stock alerts, and data visualization features. Enhanced the user interface using Tailwind CSS and integrated reporting functionalities to improve inventory monitoring and decision-making. Gained practical experience in full-stack web development, database management, and software engineering practices.

PROJECTS

Language Switch System | Python, Flask

- The Language Switch System is a project designed for efficient multilingual communication. It offers text-to-speech translation, voice translation, and language translation to process text and spoken input accurately across multiple languages. With a user-friendly interface and modular design, it ensures real-time language processing and easy extensibility for future enhancements.

AquaVision: Fish Species Detection and Disease Analysis | Flask, TensorFlow, SQLite, ML/DL

- Developed an AI-powered web application that identifies freshwater fish species and detects common fish diseases such as Aeromoniasis and Saprolegniasis using deep learning. Users can upload fish images for instant analysis, receiving disease predictions with confidence scores, symptoms, and care recommendations. The system includes a history dashboard to track previous analyses and supports early disease detection in aquaculture.

Inventory Management System | Laravel, PHP, MySQL, Tailwind CSS

- Implemented user authentication, product management (CRUD), inventory tracking, category-based filtering, low-stock alerts, dashboard analytics, and data visualization. Designed a responsive user interface and integrated reporting features to improve inventory monitoring and decision-making.

AI-Based Music Composer | Django, Machine Learning, REST APIs, Postman

- An AI-driven music composition system that generates original melodies and harmonies using machine learning techniques. The application exposes REST APIs built with Django for music generation and playback. Postman is used for API testing and validation to ensure accurate and smooth audio output. The project focuses on automation, creativity, and scalable system design.

Aqua Analysis Platform - Smart Drainage System | ML, Arduino IDE, IoT

- The Aqua Analysis Platform is an IoT-based smart drainage system designed to monitor urban drainage infrastructure in real time. It integrates hardware sensors with a software dashboard using Arduino IDE and Python for data acquisition and analytics. Machine learning models predict potential blockages, while instant SMS/email alerts are triggered for anomalies such as waterlogging or overflow, enabling proactive maintenance and efficient flood management.

COURSES

- Certified in the course "Programming Using Java" authorized by Infosys in the year 2024.
- Certified in the course 'Introduction to Internet of Things' authorized by NPTEL in the year 2023.
- Certified in the course 'Programming in java' authorized by NPTEL in the year 2024.
- Certified in the course 'Google IT and Support' authorized by Coursera in the year 2024.
- GFG160 - Completed GFG 160 days coding program – April 2024.
- Postman API Fundamentals Student Expert, badge in the year 2024.
- Multiagent Collaborative Agent Program, selected project under IUCEE platform – 2025.
- Attended workshop of "Cyber Security" organized by CSE department May 2025.
- Certified in the course Artificial Intelligence Primer, authorized by Infosys – 2024.

ACHIEVEMENT

- GreenVolt – Shortlisted in UNISYS Ideathon Top 20 for GreenVolt, an innovative EV charging and maintenance project using real-time analytics and predictive maintenance.
- The project "AquaFlow Analysis: The Future of Smart Sanitation" was shortlisted for the UNISYS Innovation Program Ideathon 2025, recognized for smart sanitation solutions using real-time monitoring and predictive analytics.
- Pragati Path to Future – Successfully completed Infosys' Pragati Path to Future Cohort 3 after 11 weeks of virtual learning and an in-person experience at Infosys Bangalore DC.
- Received Outstanding Female Student Achiever Award at MITE on the occasion of International Women's Day.
- Selected as a Contributor for GirlScript Summer of Code (GSSoC) 2025, a national-level open-source program.
- Selected as a Contributor for Open Source Connect India (OSCI) 2025, contributing to open-source development.
