TECHNICAL SKILLS

Programming & Analysis

Python (Pandas, NumPy), SQL, MySQL, Statistical Analysis, EDA, Correlation Analysis, Hypothesis Testing

Machine Learning

Regression & Classification fundamentals, scikit-learn basics (self-directed study, in progress)

Data Visualisation & BI

Power BI, Tableau, Matplotlib, Seaborn, Dashboard Design

MS Office Suite

Excel (Pivot Tables, VLOOKUP, HLOOKUP, Conditional Formatting, Data Validation), Word (Mail Merge, Formatting, Templates), PowerPoint

Cloud & Tools

AWS (Cloud, ML Foundations, Data Center), Git, GitHub, Jupyter Notebook

Remote Work Ready

Google Workspace, MS Teams, Slack, Self-managed deadlines, Async reporting

CERTIFICATIONS

AWS Academy Graduate – Cloud Developing

AWS Academy Graduate – ML Foundations

AWS Academy Graduate – Data Center Technician

Google Data Analytics Certificate – Coursera (In Progress)

Python for Data Science – NPTEL

EDUCATION

B.Tech, CSE

Rustamji Institute of Technology, Gwalior
2023-2027 | CGPA: 6.61

12th - CBSE

St. Paul's Sr. Sec. School, Kathgodam | 2023 | 67.8%

10th - CBSE

St. Paul's Sr. Sec. School, Kathgodam | 2021 | 68.2%

CAREER SUMMARY

Data-driven B.Tech CSE undergraduate (2027) with hands-on experience across the full analytics pipeline — data cleaning, exploratory analysis, statistical reporting, and interactive dashboard delivery — using Python, SQL, Power BI, and Tableau across three end-to-end projects covering 20,000+ combined records. AWS-certified across cloud, ML foundations, and data center fundamentals, with self-directed study in core machine learning concepts. Comfortable working independently in remote/async environments, with strong MS Excel and Word proficiency for structured, high-accuracy reporting. Seeking a fresher Data Analyst or remote Data/Reporting role to deliver accurate, well-documented, enterprise-grade analysis.

KEY PROJECTS

Sales Data Analysis Dashboard

Python & Power BI

- Cleaned and analysed 10,000+ retail records using Python (Pandas, NumPy), reducing manual processing time by ~50%.
- Built an interactive Power BI dashboard covering 8 product categories and regional sales trends for structured stakeholder reporting.
- Applied pivot-table cross-checks in Excel to validate dashboard figures before delivery.

Student Performance Analysis

Python & Tableau

- Performed EDA on 500+ student records using Python and SQL, identifying 4 key factors influencing academic performance (attendance, study hours, test scores).
- Designed 5 Tableau visualisations (heatmaps, bar charts) to present performance trends for data-driven academic review.

COVID-19 Data Visualisation

Matplotlib & Seaborn

- Cleaned and preprocessed a 10,000-row public dataset, resolving missing values and standardising records across 5 nations.
- Visualised daily case and recovery trends; applied correlation analysis across key variables to generate a structured statistical summary report.

ADDITIONAL LEARNING

- Self-directed study in Machine Learning fundamentals — regression, classification, and model evaluation concepts (ongoing, alongside NPTEL Python for Data Science and AWS ML Foundations coursework).
- Practiced advanced Excel functions (VLOOKUP, Pivot Tables, conditional formatting) for structured business reporting.

STRENGTHS

- High accuracy and attention to detail in data auditing and report writing.
- Self-managed and deadline-driven — well suited to remote/work-from-home data roles.
- Strong grasp of the full analytics workflow: raw data → cleaning → analysis → visualisation → reporting.
