

Bhagya lakshmi kolla

Bangalore, India | +91 8331803088 | nithyasrikaperlakolla@gmail.com

Summary

Experienced Tosca Automation Tester with nearly 5+ years of expertise in manual and automated testing. Skilled in developing and executing detailed test scripts using Tricentis TOSCA, ensuring comprehensive regression testing and seamless application integration. Proficient in creating and maintaining TOSCA test modules, designing test templates, and managing script execution. Strong background in System Integration Testing (SIT), Regression Testing, and defect management using JIRA. Demonstrates adaptability in handling application changes and delivering accurate, high-quality testing results.

Experience

Automation Test Engineer

02/2019 To 07/2023

TCS

Chennai, India Project Overview:

Worked as a QA Automation Engineer responsible for accelerating the quality assurance delivery of Citi's global banking applications. Implemented Tricentis Tosca as the primary functional test automation engine using its Model-Based Testing (MBT) approach. The project involved automating end-to-end Testing.

- Framework Design & Modular Scripting: Architected and sustained scalable automation testing frameworks from scratch utilizing a Modular Framework approach within Tricentis Tosca to enhance script reusability.
- End-to-End Test Automation: Engineered comprehensive automated validation scripts for both GUI and Non-UI web applications, seamlessly translating manual workflows into high-efficiency regression test suites.
- Distributed Test Execution (DEX): Optimized test cycles by configuring and executing distributed testing across DEX Agents, actively monitoring execution logs via Event View to analyze and clear performance bottlenecks.
- Advanced Scripting & Synchronization: Built robust, resilient scripts using TBox modules, conditional logic, synchronization parameters, loop mechanisms, custom recovery scenarios, and strategic Cleanup/Recovery setups.
- Data Integrity & Dynamic Parameters: Maximized test capability flexibility by avoiding hardcoded configurations; dynamically utilized Test Case Design (TCD) alongside Test Configuration Parameters (TCP), business parameters, and custom steering features.
- Technical Module Engineering: Executed multi-attribute object identification strategies using Tosca XScan to create and continuously maintain application modules, rescanning UI layout changes to guarantee uninterrupted execution.
- CI/CD Integration Pipeline: Spearheaded continuous integration initiatives by connecting automated test suites directly to development delivery lifecycles through Jenkins CI/CD pipeline hooks.
- Strategic Verification & Validation: Leveraged technical action modes—including Verify, Buffer, Constraint, and WaitOn—to evaluate UI application responses, manage exceptions gracefully, and document detailed run results.
- Cross-Functional System Synergy: Maintained structured test repositories across standard STLC project phase segments (Precondition, Workflow, and Postcondition folds); collaborated closely with cross-functional development teams to eliminate testing coverage gaps.
- Collaborated closely with cross-functional teams, including developers, business analysts, and project managers, to ensure seamless integration of automation solutions, timely project delivery, and alignment with business goals.
- Played a key role in the development and implementation of comprehensive testing strategies, aligning testing efforts with organizational objectives and project timelines to ensure high-quality deliverables and successful project outcomes.

Test Engineer 01/2018 to 02/2019

AVINEON Hyderabad, India

- **Project Overview:** During the ADCO BABGAS COMPRESSION project, key contributions included engineering comprehensive general assembly drawings aligned precisely with client work orders.
- **Quality Assurance & Standards Compliance:** Facilitated strict quality checking workflows, executing comprehensive design reviews and database updates to maintain 100% accurate, error-free technical documentation in alignment with project specifications.
- **Engineering Deliverables & Documentation:** Structured comprehensive Enhanced Junction Box (JB) engineering drawings, interconnected cable schedules, and automated terminal strip wiring reports.
- **Intelligent Asset Data Engineering:** Managed index operations within SmartPlant Instrumentation (INTOOLS) to efficiently create, configure, and manage standard tags, panels, and cable definitions for electrical and instrument layouts.
- **Loop & Wiring Architecture:** Generated precise technical wiring schemas and complex instrument loop diagrams, systematically assigning standardized corporate templates to produce high-fidelity Enhanced Smart Loops.

Skills

● Tricentis Tosca Automation testing ● Regression testing ● Functional testing ● API (Postman tool) ● User Support ● Manual Testing ● JIRA , Agile ● SPI Intols ver. 2009, 2013 ● SAP (Testing)	● User Support ● Maintenance scripts ● Ability to work in teams
---	---

Certifications

- Automation Specialist Level 1 - Tricentis
- Automation Specialist Level 2 - Tricentis
- Test Design Specialist Level 1 - Tricentis
- Test Design Specialist Level 2 - Tricentis
