PROFESSIONAL SUMMARY

Results-oriented Technical & Chat Support Professional with over 2 years of experience in high-volume digital environments, technical troubleshooting, and backend operations. Expert at managing concurrent chat sessions, diagnosing complex technical/billing inquiries, and navigating advanced CRM systems. Proven ability to meet strict SLAs, drive technical resolution, and maintain high accuracy across both front-end customer service and back-end data functions.

PROFESSIONAL EXPERIENCE

WNS GLOBAL SERVICES, Offshore — Customer Support (CHAT) — Farmers Insurance, USA September 2024 – June 2025

- **Digital Queue Management:** Handled high-volume inbound chat queues, providing real-time technical and account support regarding digital policies, premium payments, and online portal access.
- **Resolution Excellence:** Focused on achieving First Contact Resolution (FCR) by troubleshooting customer portal issues, resetting access configurations, and cross-referencing internal databases.
- **SLA Compliance:** Consistently met individual KPIs, optimizing chat response speeds and customer retention metrics in a fast-paced environment.
- **Data Integrity:** Detailed and logged all digital interactions and system adjustments into the company's tracking platform for seamless downstream follow-ups.

KPMG India, Pune, India — Analyst (Backend & Chat Support) January 2020 – August 2022

- **Technical Chat Support (Apr 2020 – Aug 2022):** Provided real-time chat assistance to clients, resolving technical inquiries related to digital platform service coverage, account modifications, and system access issues.
- **Backend Operations (Jan 2020 – Mar 2020):** Managed backend data processing and record maintenance, ensuring all system configurations accurately reflected account upgrades and database changes.
- **Data Quality Assurance:** Audited and resolved critical data discrepancies between client records and internal infrastructure to maintain strict compliance standards.
- **Process Improvement:** Identified structural bottlenecks in the backend workflow, suggesting automation and tracking enhancements that improved chat response accuracy.
